

Investigate B4U Vaccinate

**Making Informed Choices
About Vaccinations**

Presented by Dr. Greg Anderson
SB County's Wellness Expert

Vaccination is an Emotional Issue

What is a parent to believe?

It's a highly charged emotional issue... with parents, schools, and medical personnel sometimes challenging and confronting each other. One thing has become increasingly clear. As the number of vaccinations continues to rise, vaccination rates are dropping as parents continue to opt out.

Informed Choices

Vaccination is not a chiropractic issue, it is a **FREEDOM OF CHOICE** issue.

Ultimately, you are responsible for your child's health, not your doctor, not your child's school, or your elected officials. So, you should be able to make an informed decision whether or not to vaccinate.

Breastfeeding

Although they have some antibodies from the placenta of their mother, newborns enter the world largely unprotected.

An infant produces antibodies efficiently at about 6-12 months, but the immune system is not fully developed until it is about four or five years old. This is one of the reasons why it is important to breastfeed your baby

The First Vaccines

Edward Jenner was called the “Father of Vaccination”. He mistakenly inoculated a boy with syphilis (cow pox) thinking it was smallpox and the boy didn’t get smallpox.

What a surprise!

James Phipps was Jenner's second Cowpox experiment.

The Germ Theory of Disease

- The germ which causes a disease must be found in every case of the disease.
- The germ must not be found in other diseases or healthy people.
- The germ could be isolated and used to induce an experimental disease in animals or humans.

(Koch's Postulates as they apply to Pasteur's work.)

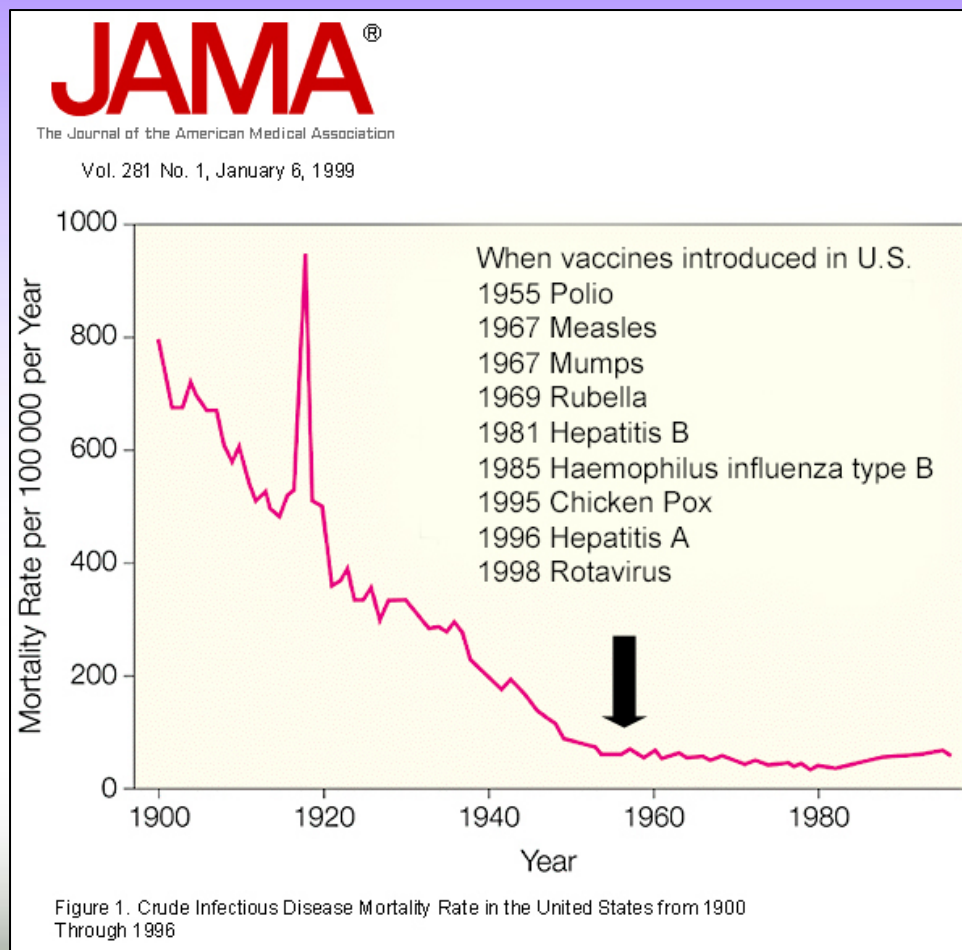

Are Children Healthier Today?

- 1 in 6 children in the U.S. today has a neuro-developmental disorder. (ADD, ADHD, Autism)
- 13% of American children today are enrolled in a learning disability program. (15 million children)
- There are between 1 and 4 million autistic children in the U.S. today whereas in 1990 there were practically none.
- 8.9% of all U.S. children have asthma today. 1 out of 4 children uses inhalers.
- The number of children with allergies has doubled in the past 10 years.
- The rate of childhood cancer is increasing at an exponential rate to levels never seen before or imagined.
- Autoimmune diseases, diabetes, asthma, MS and brain tumors among young people are skyrocketing.

Vaccines Wiped Out Infectious Diseases?

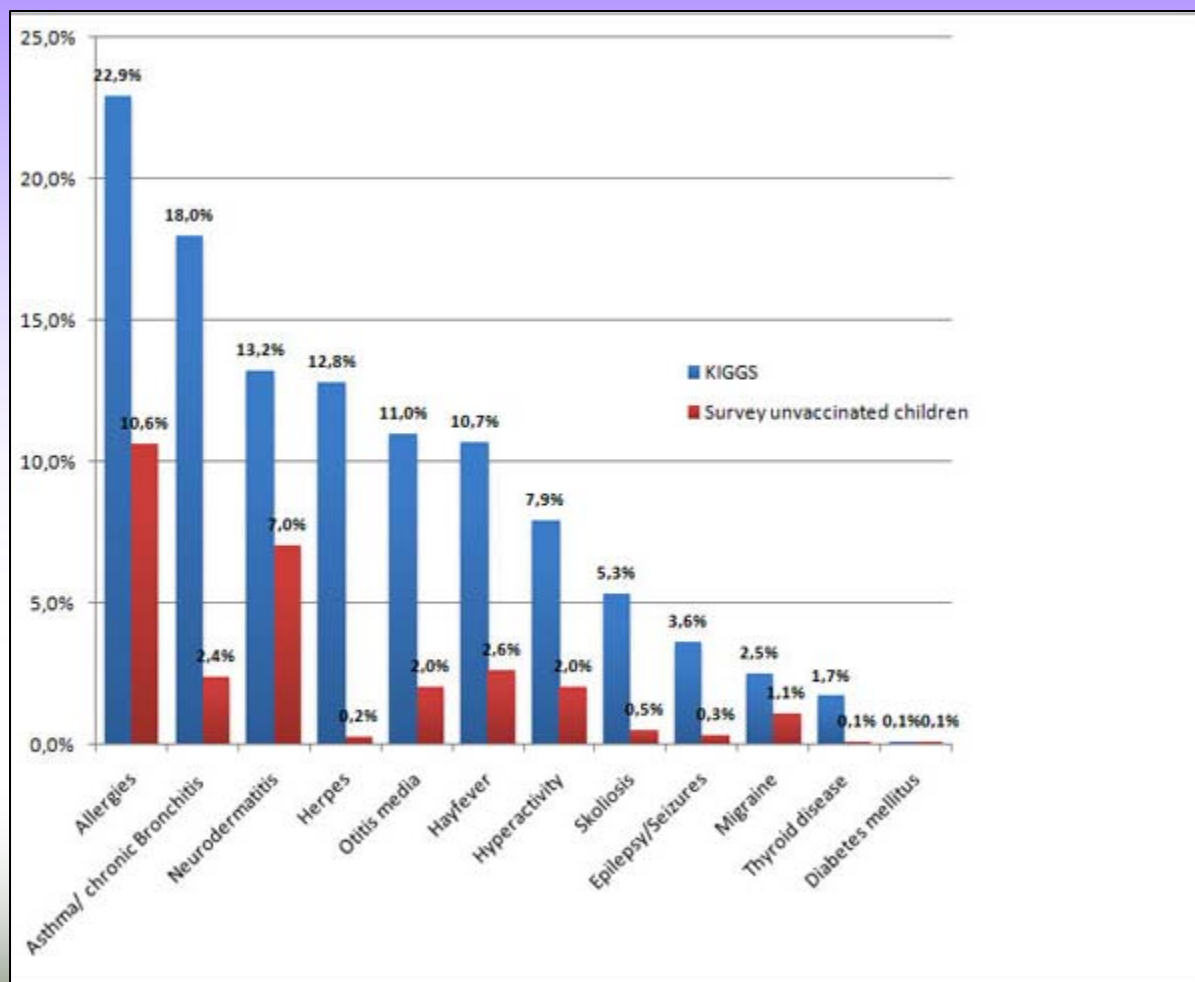

“... the largest historical decrease in morbidity and mortality caused by infectious disease was experienced not with the modern antibiotic and vaccine era, but after the introduction of clean water and effective sewer systems.”

The Journal of Pediatrics, December 1999, Vol. 135, No. 6, p. 663

Vaccinated Children Are Healthier

Vaccines Are About Health & Public Safety?

Who's Minding the Hen House? ... Follow the Money!

- FDA (Approves vaccines)
- CDC (Adds vaccines to mandated schedules)
- Public schools

Vaccines Are Safe?

- Polio
- DTap/DPT
- Tetanus
- Measles
- HiB
- Hepatitis B
- Rotovirus

Vaccines and SIDS

" ... we found the SIDS mortality rate in the period zero to three days following DTP to be 7.3 times that in the period beginning 30 days after immunization."

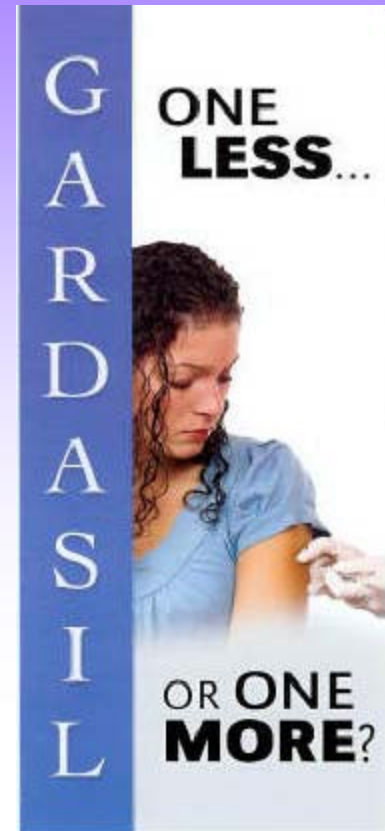

American Journal of Public Health - "Diphtheria-Tetanus-Pertussis Immunization and Sudden Infant Death Syndrome", Alexander M. Walker, MD, et. al., Vol77, No 8, 1987 p945-950.

First DTaP/DPT vaccine at 2 months

HPV and Gardasil

- Gardasil Slogan SHOULD be “One Less Vaccine”
- Adverse reactions to Gardasil vaccine = **20,096** reported.
(CDC 9-15-11)
- Deaths attributed to the Gardasil vaccine = **71** children
(CDC 9-15-11)

Now they are
giving it to
our boys!

Are Flu Shots Necessary?

Flu Pandemic of 1917-18

Medical doctors in the State of Iowa treated 93,590 patients, with 6,116 deaths. **1 out of 15 patients died.**

At the Palmer College of Chiropractic in Davenport, Iowa, 1,635 flu cases were adjusted, with only one fatality. **1 out of 1,635 patients died.**

Rhodes WR: "The Official History of Chiropractic in Texas." Texas Chiropractic Association. Austin, TX. 1978.

Vaccines Affect Natural Immunity of Future Generations

"A whole group of young mothers who had been vaccinated against measles, and therefore had only temporary artificial immunity, were not able to give their babies the protection their unvaccinated mothers had given them."

Barbara Loe Fisher, co-founder and president of the National Vaccine Information Center and co-author of "A Shot in the Dark"

Now You Know...

There are two sides to the vaccine controversy... and now you have a more information upon which to base a decision for yourself and for your family.

"There is a great deal of evidence to prove that immunization of children does more harm than good."

Dr. J. Anthony Morris, former Chief Vaccine Control Officer and research virologist, US FDA

A Final Thot

Human health does not come from a drug or a vaccine. A healthy baby needs no outside assistance, particularly having potentially dangerous pathogens and chemical toxins injected directly into their bloodstream.

Nature needs no help, just no interference.
